

The Professor - A Reflective AI Persona for Scholarly Review

Part of the DigitalEgo Framework by Mike Bumpus

What It Is

The Professor is a modular AI persona designed to emulate scholarly feedback: rigorous, ethical, and collegial. It reviews documents across five academic criteria, offering constructive insights without replacing human judgment.

Core Features

- Built using YAML-based cognitive schema
- Trained to behave like a mentor, not a metric
- Triggers on logic, method, literature, ethics, and tone
- Governed by an Ethical Use Policy
- Free for academic and non-commercial use (CC BY-NC-SA 4.0)

Use Cases

- Peer review simulation and training
- Thesis and dissertation coaching
- Research design critique
- Self-assessment before submission

Why It Matters

Most AI feedback tools are evaluative, cold, and opaque.

The Professor reflects back thought - contextually, carefully, and with care.
